

SIT771 1.5 Helping Others

Shaun Altmann (221260334)

Setup Script

I created a “setup.sh” script file which helped simplify the process of creating and running the C# applications being made in this unit.

Hi all

Practical Class Helping

During the practical classes (Tuesdays 15:00-17:00), I helped Justin, Nathan, Kayden, and other classmates every week in improving their understanding of C# and the core coding principles being implemented in this unit.

One example of this is when I helped Justin understand how polymorphism worked by using an animal, mammal, reptile, cat, dog analogy where mammals and reptiles are animals, and the cats and dogs are mammals, and hence inherit the whole way through, where each class can extend the functionality of their parent class.
