8.2 Concept Visualization 2

Shaun Altmann (221260334)

Inheritance & Polymorphism

This infographic works by explaining how method can be passed down through inheritance, and how polymorphism allows child classes to edit the original functionality of the "abstract" parent class method.

Lambdas & Delegates

Also known as "actions", they are often used as a type of variable to allow for methods to be passed around. This visualization emphasises that they can be assigned just like variables, however like methods they need to be called to get a value instead of just having an immediately accessible value.
